10 Yellow Fever inquiries in the next 7 days. You spend nothing.

We build the landing page, run the Google ads, and **pay for them ourselves**. You answer the calls that come in. That's the entire arrangement.

THE TRADE: WHAT WE BUILD, WHAT YOU DO, WHAT WE GET

What we build and pay for

- A landing page for Yellow Fever inquiries, built for your pharmacy
- The Google Ads campaign, set up, managed, and funded by us
- Call routing straight to your counter
- Local pricing guidance for your area

What you do

- Answer the calls that come in
- Book the eligible patients
- Order the vaccine in if you don't stock it
- Follow the one-page call guide we send you

What we get

- An honest Google review at the end, only if the pilot worked for you
- Permission to write up your results as a short case study, you approve what's in it
- A first pharmacy in your city, which is what lets us open the next one

HOW IT WORKS: FOUR STEPS, THEN WE STOP

1

You claim your city

A 15-minute call confirms your city is open and reserves it for you. No paperwork, no contract.

2

We build and launch within 48 hours

Landing page, ads, call routing, and your one-page call guide. Nothing touches your website or POS.

3

Calls come in, you book patients

People near you already searching for a Yellow Fever clinic. Every inquiry lands in a shared tracker you can see from day one.

4

At 10 inquiries, we stop. You decide.

If it worked, you leave an honest review and choose whether to continue.

A FIT IF YOU ARE

A licensed Yellow Fever centre
Or able to order the vaccine in for booked appointments.

Independent, owner-run
We work with the owner directly, no head office in between.

In a city that's still open
One pharmacy per city, first come first served.

Able to answer the phone
The calls are no use if nobody picks up.

NOT A FIT IF

You're part of a corporate chain
Decisions there don't sit with the person answering the phone.

Calls routinely go unanswered
We'd be paying for inquiries that go nowhere, bad for both of us.

Your city is already claimed
Two pharmacies on the same searches just bid the cost up and split the patients.

What happens after the 10?

We stop. If it worked, you can keep the system running for a flat monthly amount, paid from what the ads bring in. You'll know the exact cost per inquiry before you decide.

I'm Yousef. Ten years building paid-ads funnels for healthcare clinics. Two years ago we built this system for one travel clinic, and it still runs today. We're now turning it into the Travel Vaccine System™ and launching it city by city. Your pharmacy has been selected for a free pilot: we build it, run it, and pay for it, and in return we're looking for an honest review and a case study. No risk to you.
